Anna Sokolova

Analyst | Process analysis | Requirements | Data

anna.sokolova@sokolova.xyz | t.me/askannasklv | askannasklv.github.io/analyst | Saint Petersburg, Russia

SUMMARY

Analyst with IT and medtech experience: 6 years across projects, processes and data. I map processes, gather requirements through interviews, write specifications and drive automation to measurable results: application processing cut from 60 to 10 minutes, procurement data from days to hours.

EXPERIENCE

Data Analyst **Mar 2026 — present**
Laboratory equipment manufacturer and distributor *Saint Petersburg*

- Launched a government-procurement analysis tool for the IVD market in 4 weeks for managers, replacing manual contract search; 6 user interviews led to changes in product classification, metrics and structure
- Cut government-procurement data retrieval from days to hours: built a Python/pandas ETL pipeline in 2 weeks for 400K+ public-procurement records per year; kept business rules separate so non-engineers can review them
- Traced root causes of price anomalies in procurement data (similarly named equipment, undisclosed vendor affiliations) and fixed them with reference data and data quality checks (duplicates, missing values)
- Ran 5 lab-diagnostics market studies (patient flow, competitors, regulatory registries in Russia, EU, China, FDA)
- Built an equipment install base from public-procurement data: brand dictionaries + LLM-based name normalization, surfaced in DataLens and Superset dashboards
- Built a RAG system over the medical-device registry in 1 week (Python, local embeddings, CLI, Claude Code); benchmarked it against a Claude Project on 5 real colleague queries and chose the Claude Project as more accurate and easier for users

Project Manager, joint programs with universities (ITMO, HSE, MIPT) **Apr 2023 — Feb 2026**
Yandex *Remote*

- Cut application processing from 60 to 10 minutes and student response time from 2 hours to 30 minutes: mapped the process in Miro and moved 1,000–1,500 applications per half-year from Google Sheets to Yandex Tracker with automations
- Wrote a full technical specification for automating the admissions campaign and ran the project with developers: tracked progress, reported failures with root-cause hypotheses
- Reduced dissatisfaction among HighLoad Systems master's students (60+) by 40% in one semester: launched CSAT/NPS surveys that led to instructor changes; weekly meetings added ~20% more
- Assessed exam risks (two formats, slot shortage): extra slots were added, removing the risk of unequal conditions
- Took part in hiring and onboarding 5 coordinators: guidelines, scripts, annual task calendar, regular 1:1s

Project Manager, online education **Sep 2020 — Aug 2023**
Freelance; MCK Tsel + UNTI 2035 *Remote*

- Cut average online-product launch time from 30 to 14 days: 10+ full launch cycles with distributed teams of 5–30 people
- Reduced support tickets (GetCourse) by 60%, from 400 per week

KEY SKILLS

Business analysis: requirements gathering and specification, semi-structured interviews, process analysis and mapping (Miro), technical and functional specifications, CJM, risk assessment
Data & BI: SQL (basic), Python/pandas (developed with Claude Code), Excel, Power Query, 1C, ETL, data quality, DataLens, Superset
Automation & AI: Yandex Tracker (automations), LLM pipelines, RAG, Claude Code
Communication: presenting data to non-technical stakeholders, defending findings, working with developers, legal and external partners
Tools: Git, ClickUp, Google Sheets
Languages: Russian — native, English — C1

EDUCATION

Saint Petersburg State University, 2019 — 2025 — Clinical Psychology (specialist degree)
Certificate: Yandex School of Data Analysis — AI Agents, 2026
Publication: co-author of a qualitative-methods paper, ECQI-2024 (Helsinki)
